

TEAM RAFT BUILDING

Raft building can be done on many levels, from producing a raft to carry a teddy bear across a paddling pool, to a raft to carry the whole patrol across a lake. It traditionally involves building a raft from various objects, usually pioneering poles, ropes and barrels.

This activity promotes team work and cooperation as well as testing out the group's knowledge of knots and their concepts of building items from scratch.

As with most water-based activities, getting wet is part of the fun.

Teamwork and communication are stretched to the limit in this exciting fun experience. For this exercise the team must plan, design, produce and float a manned raft, which combines planning, communication and working together.

Participants divide into small project teams. Each is charged with the challenge of building a raft from a limited supply of resources (barrels, boards, and rope). The vessel must be capable of transporting several team members and to then navigate through a course back to shore.

All members of your crew must coordinate efforts to brainstorm, create and build the raft.

What is included in your Teambuilding?

- Bandanas
- MC
- Facilitation Staff
- A huge array of materials and equipment
- Event Set Up and Logistic Management

Group Size: 10 – 200 / Time: 1- 2 hours / Space: Outdoor location
